TOKENOMICS

Auto Yield and Liquidity Generation

Auto Yield: Tokens employing auto yield typically redistribute a portion of the transaction fees back to existing holders. This is done proportionally based on the amount of tokens each holder owns. It encourages users to hold onto their tokens for longer periods.

Liquidity Generation: A portion of the transaction fees is often used to add liquidity to the trading pool on decentralized exchanges. This helps to enhance the token's liquidity, contributing to more stable and efficient trading.

Customizable Fees to Reward Holders: The developers set specific percentages of each transaction that will be allocated to reward holders. This allows for flexibility in adjusting the reward system based on the token's goals and community preferences. Charge Different Fees for Buying or Selling:

Tokens can implement different transaction fees for buying and selling. For instance, a higher fee might be charged for selling, discouraging frequent selling and encouraging users to hold their tokens for longer durations.

Note: Liquidity locked for 1 years
